KPS PUBLIC SCHOOLS • STUDENT TECH BENCH PROGRAM

Evaluator Key — managers only

Tier 2 — Challenging Repair

T2

Screens, cameras, hinges and palm rests: the delicate parts of the lid and case.

In this guide

1 Answer key

2 Scoring the knowledge check

3 Running the practical exam

4 Awarding the certification

Rev 1.0 • October 2026

Keep this away from candidates. This key is for lead techs and managers. Don't leave it on the bench or share the file.

1 Answer key

#	Answer	Why
1	**C** — Screen	Tier 2: screen, camera, palm rest, hinges, body damage.
2	**A** — Match the part number on the old panel's label	Size alone isn't enough: connector, resolution and touch must match.
3	**D** — After testing the picture	Test first so you don't have to undo it.
4	**B** — Slowly, flat along the lid	Pulling up snaps the strip; slow and flat lets it release.
5	**B** — Display cable pinched or not seated	Angle-dependent faults point to the cable through the hinge.
6	**D** — The antenna wires: pinched or unplugged	Antennas run through the lid and hinge.
7	**A** — No, they're mirror images	Left and right hinges differ.
8	**C** — The post is stripped: cover replacement	A stripped post can't hold a screw; the cover needs replacing.
9	**D** — Safety glasses and tape across the crack	Tape keeps the shards together.
10	**B** — About 20	Enough to catch an intermittent pinch.
11	**C** — Tier 3 (two Tier 2 items)	Two Tier 2 items in one incident can move the claim to Tier 3. Ask the lead tech.
12	**A** — Warm the edge gently and use a thin plastic pick	Gentle warmth softens the adhesive; replace the adhesive on refit.
13	**A** — Photograph its route and clips	The photo is how you put it back exactly.
14	**C** — Every verify item plus a full diagnostics run	A proper QA check catches problems before the student does.
15	**D** — The touch panel assembly for that model	On most convertibles the touch layer and panel are one part.

2 Scoring the knowledge check

- One point per question. Score 85% or better (13 of 15).
- Go over every missed question with the candidate, using the "Why" column, before they leave.
- A candidate who misses the pass mark can retake a different-order version after a week. Shuffle the answer letters when you reprint.

3 Running the practical exam

- Allow about 75 minutes. Set up the devices and any planted faults before the candidate arrives.
- Watch, don't coach. Step in only for safety.
- Mark each task Pass or Fail against the "To pass" column. All tasks must pass.
- Any automatic-fail item ends the exam immediately.

Task	Set up beforehand	Watch for
Bezel	Remove and refit the bezel on the evaluator's chosen model.	No cracks or bent clips; flush fit; camera window aligned.
Panel	Replace an LCD panel (screw or tape type).	Correct part, tested before fastening, new tape strips if needed.
Display cable / camera	Replace the display cable or camera module.	Original route and clips, both ends seated and taped, flex test passes.
Hinge	Replace one hinge.	Correct side, even tension, no pinched cables, Wi-Fi strength normal.
QA	Check a planted faulty repair (e.g. antenna unplugged, cable unlatched) and find the fault.	Finds and fixes it, notes it on the ticket.

Automatic fail items. Pressing on or prying against the screen glass; Fastening a panel before testing it; Pinching a cable in the hinge; Working inside with the battery connected; Fitting the wrong-side hinge.

4 Awarding the certification

- Check every requirement on the sign-off page is signed, including the prerequisite.
- Sign and date the candidate's sign-off page.
- In the portal, open Certifications, find the candidate, and click the box for this certification. It's recorded with your name and the date, and logged.
- If a certified student has a safety violation or repeated comebacks, remove the certification in the portal (click the check again) and note why in the audit log reason or the student's file.
